FUSION® EXTENDS SIGNATURE SERIES MARINE AMPLIFIER RANGE TO ENHANCE ON BOARD AUDIO EXPERIENCE

Auckland, New Zealand – Fusion®, a worldwide leader in marine audio entertainment, announced today the release of two new additions to its industry-leading range of marine audio entertainment products, the Signature Series six- and eight-channel class-D marine amplifiers. Adding to the company's existing line of monoblock, four- and five-channel Signature Series Amplifiers, the new six-channel 1500 Watt and eight-channel 2000 Watt amplifiers deliver an impressive power rating and are designed to suit all audio installation requirements. To complement the complete entertainment package, Fusion has also launched a line of high-quality performance RCA cables.

The result of world-class design and engineering, the extremely powerful Signature Series Amplifiers are built with Class-D amplification for higher efficiency and output, a rigid aluminum heat sink, a subsonic filter, variable low and high pass crossover filters, and are 2 Ohm stereo stable and includes variable bass boost, behind a stainless-steel front panel with a stylish mirror finish. Ensuring low current draw from the battery while delivering increased power, the highly efficient Class-D design makes the Signature Series perfect for any boating environment.

"We are excited to broaden our range of products with the release of the six- and eight-channel Signature Series Amplifiers and our new RCA cables," said Chris Baird, managing director, Fusion Entertainment. "We are well known for our award-winning marine stereo's, and have invested heavily in delivering innovative, high-quality products and solutions that provide our customers a superior listening experience across the entire audio chain. The announcement of the additional Signature Series Amplifiers and performance RCA cabling is a further commitment from the brand to deliver the ultimate audio experience from the kickdrum to the eardrum."

Carrying Fusion's True-Marine accreditation, these amplifiers are protected by an industry-leading three-year warranty. Ensuring cleaner, clearer, enhanced audio signal for the best sound quality, Fusion's new range of RCA cables and connectors feature directional, shielded twisted pair cable providing superior noise rejection. The connectors are also gold-plated to prevent corrosion.
